Here's the google sheet that you have to connect with the automation:

Email Outreach GOOGLE SHEET

You just need to duplicate this google sheet and connect it with the automation.

Follow the below process:

How to Import a JSON Workflow in n8n & Get It Working

1. Open n8n

- Go to your n8n editor (cloud or self-hosted).
 - Log in.
-

2. Import the JSON File

- Click “**Workflow**” in the top menu.
 - Select “**Import from File**”.
 - Upload your **.json** workflow file.
 - You'll see all nodes load into the canvas.
-

3. Add Your Credentials

Most templates break because credentials are missing. Do this:

- Select any node that uses an integration (Google Sheets, Gmail, OpenAI, Slack, etc.).
- In the **Credentials** section → click “**Add New**” → connect your account.
- Save.

Repeat for all nodes that need credentials.

4. Update Environment Variables (if any)

If the template uses:

- API keys
- Webhook URLs
- Custom variables

...update them in:

Settings → **Variables** (or directly inside the relevant nodes).

5. Test Each Node

- Click a node → press “**Execute Node**”.
 - Make sure it returns data without errors.
 - Fix any missing parameters.
-

6. Turn On the Trigger

If the workflow starts with:

- **Webhook**
- **Cron**
- **Schedule Trigger**
- **App Trigger**

Make sure you:

- Activate the workflow (top-right “**Activate**” button).
- For webhooks → copy the URL and connect it to your form, zap, or other app.

7. Activate the Workflow

Once everything runs smoothly:

- Press **Activate**.
- Your automation template is now live.
